Carbon Monoxide

CO can make you dizzy, nauseous, tired or even threaten your life. Follow these safety tips:

- **Never run a car in an enclosed space.** Even with a door or window open, carbon monoxide levels can still build up to an unsafe level.
- **Make sure you have working carbon monoxide detectors.** All homes and duplexes in Wisconsin are required to have detectors on every level, including the basement, but not the attic or storage areas. Replace the batteries in your detector and push the "Test" button to be sure it's working properly. Replace your detector every five years or according to manufacturer's instructions.
- **Have your furnace or wood-burning stove inspected annually.** Hire a professional to make sure it is functionally sound and vents properly outside the home.
- **Never run a gasoline or propane heater or a grill (gas or charcoal) inside your home or garage.** Any heating system that burns fuel produces carbon monoxide. Use a battery-powered detector where you have fuel burning devices but no electric outlets, such as in tents, cabins, and RVs.
- **Generators should be run at a safe distance (at least 20 feet) from the home.** Never run a generator in the home or garage, or right next to windows or doors.
