Sheet 38 Amendment No. 443

Issued: April 26, 2019

Excess Flow Valves - Schedule EFV-1

Excess flow valves (EFVs) are safety devices installed on natural gas distribution pipelines to reduce the risk of accidents.

EFVs shall be installed on new or replaced gas service lines for single-family residences, multi-family residences and small commercial entities consuming gas at a rate not exceeding 1,000 standard cubic feet per hour (SCFH).

Upon customer request, the Company shall retrofit an existing service line with an excess flow valve, provided the customer pays the applicable installation charge to the Company.
